

Conceptual Thinking

Model solution

Exercise 1.1 : Find the classes, objects and concepts

2

Situation outline: You choose a movie on Netflix, and the next day you log in again to watch something new. Netflix makes some recommendations based on your viewing behaviour, and you can also check your viewing history to see which films or series you have seen recently.

Questions:

- Before you choose the film. What do you want to know about it?
- How does Netflix make recommendations?
- How can I watch Netflix and my sister too?

Exercise 1.1 : Find the objects and concepts

1) all classes

First Stage (Viewing history): After watching a film, you probably want to know a few things about what you just watched: FILM

- Title: What film or series did you watch?
- Duration: How long was the film and how long did you actually watch it?
- Status: Did you finish the film completely, or did you stop halfway through?

In this phase, the focus is on the film/series itself and your personal viewing history.

Second Phase: You get recommendations for new films. Now that you have reopened Netflix, a number of recommendations appear on your screen. You want to know: USER INFORMATION

- Which films or series are recommended: Which new films or series are suggested based on your previous viewing behaviour?
- Name of your profile: Is the profile you logged in with correct (e.g. because you have multiple family members with separate profiles)?
- Recently watched titles: What other films or series have you watched recently, and are there any patterns in the recommendations?

Exercise 1.1 : Find the objects and concepts

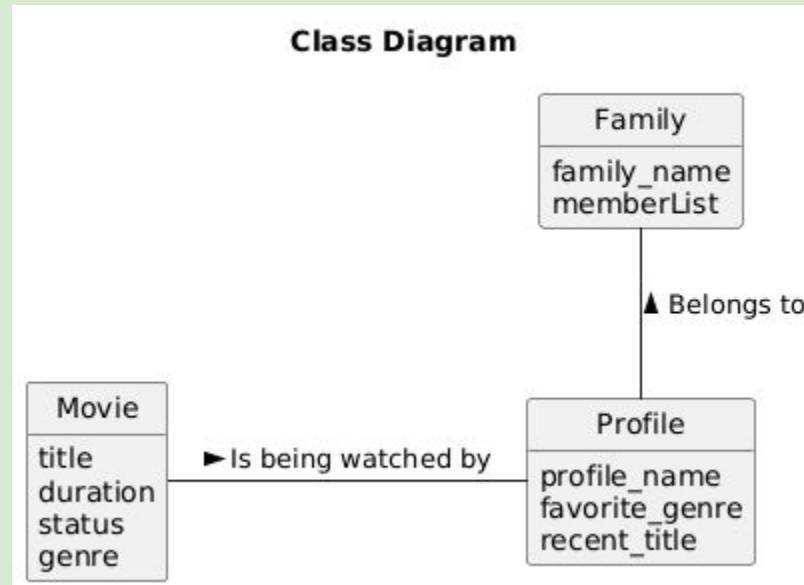

1) all classes

If you use Netflix with a family profile, you might want to know: PROFILE INFORMATION

- Which profiles have watched what: Has anyone else on the profile watched something that is not your taste?
- Individual preferences: What films and series are specific to your profile, as opposed to other users in the family?

Exercise 1.1 : Find the objects and concepts

4) class diagram with associations

Exercise 1.1 : Find the objects and concepts

2) object diagram
